Another straightforward calculation will show that $\text{div}(\text{curl} \mathbf{F} - \text{curl} \mathbf{F} + \Delta \mathbf{F}) = \Delta(\text{curl} \mathbf{F})$. The vector Laplacian also arises in diverse areas of mathematics and the sciences. The frequent appearance of the Laplacian and vector Laplacian in applications is really a testament to the usefulness of div , grad , and curl .

text (pamphlet) "Div, grad, curl and all that", by H. M. Schey. This 150 page easy-to-read book is one of my personal favorite math texts. It is easy to read, affordable (\$35), and should be in everyone's library. Preliminaries Before we dig into the details, we need to set up a few preliminary ideas and conventions. The first is

the curl of a vector field. There are two points to get over about each: The mechanics of taking the grad, div or curl, for which you will need to brush up your multivariate calculus. The underlying physical meaning — that is, why they are worth bothering about. In Lecture 6 we will look at combining these vector operators.

Lecture 5 Vector Operators: Grad, Div and Curl

The divergence of the curl of any vector field \mathbf{A} is always zero: $\text{div}(\text{curl} \mathbf{A}) = 0$. This is a special case of the vanishing of the square of the exterior derivative in the De Rham chain complex. Divergence of gradient is Laplacian

There is another method for proving Theorem 4.15 which can be useful, and is often used in physics. Namely, if the surface integral $\iint_S \mathbf{f} \cdot d\mathbf{a} = 0$ for all surfaces S in some solid region (usually all of \mathbb{R}^3), then we must have $\mathbf{f} = 0$ throughout that region. The proof is not trivial, and ...
