Therefore, there will be less demand for the currency and its value will tend to fall on the exchange rate markets. 2. Lower interest rates. Also, if you increased the money supply, (through a Central Bank creating more money), then this reduces interest rates. Higher money supply puts downward pressure on interest rates.

Money supply and the exchange rate - Economics Help

♦Real output and income are determined by the supply of labor and other factors of production—by the economy's productive capacity—not by the supply of money. ♦The interest rate depends on the supply of saving and the demand for saving in the economy and the expected inflation rate—and thus is also independent of the money supply ...

Money, exchange rates, and output (Book, 2006) [WorldCat.org]

A fixed exchange rate, sometimes called a pegged exchange rate, is a type of exchange rate regime in which a currency's value is fixed or pegged by a monetary authority against the value of another currency, a basket of other currencies, or another measure of value, such as gold.. There are benefits and risks to using a fixed exchange rate system. A fixed exchange rate is typically used to ...

Fixed exchange rate system - Wikipedia

An exchange rate appreciation causes a slower growth of real GDP because of a fall in net exports (reduced injection) and a rise in the demand for imports (an increased leakage in the circular flow). A reduction in demand and output may cause job losses as businesses seek to control costs.
