In computing, a visual programming language (VPL) is any programming language that lets users create programs by manipulating program elements graphically rather than by specifying them textually. A VPL allows programming with visual expressions, spatial arrangements of text and graphic symbols, used either as elements of syntax or secondary notation. For example, many VPLs (known as dataflow ...

## **Visual programming language - Wikipedia**

But we have always taken a very pragmatic approach to our definition of "programming language," and the reality is that when people are looking to use an Arduino-compatible microcontroller, they typically search for "Arduino code" or buy books about "Arduino programming," not "Wiring code" or "C programming.")
